WASTE MANAGEMENT BRANCH

FILE COPY

Dear Mr. Boyd:

Enclosed are the documents you requested during your July 15 inspection at Pier 91. They include:

- 1) The Pier 91 training program
- 2) The compatibility procedures
- 3) The hazardous materials information guide
- 4) A copy of manifest #00053 for the load that was shipped on 7/14/86 from Pier 91

In regard to your request for the analytical data on the drums identified as containing boiler cleaning chemicals, the plant manager subsequently contacted the individual who was sorting that material to track down the lab data. After discussion with him, the plant manager went back and examined the contents of the drums and determined that they in fact contained debris from the oil/water separator input screen. This material would be mostly cans, bottles, rags, sticks, rocks etc. They were sitting in the drums to allow the oil to drain off so the liquid could be solidified with absorbent.

The confusion occurred since the crew that shipped out the drums on 7/14/86 had changed the location of the drums in the warehouse. These particular drums have since been labeled and identified.

USEPA RCRA

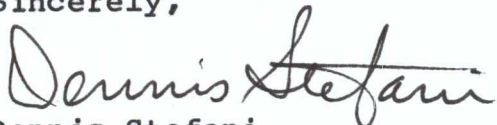

3012712

The boiler chemicals are still in their original drums with the original labels. They are located in the northeast corner of the warehouse near the loading dock. The boiler chemical has the trade name of Scqlex.

If you have any questions, please contact me at 767-0350.

Sincerely,

A handwritten signature in cursive script that reads "Dennis Stefani".
